

PLASTIC  
MOULD STEEL

# PLASTIC MOULD STEEL

**BÖHLER M340**   
**ISOPLAST®**

## EXACTLY TO YOUR LIKING

An increase in productivity in high-tech mould-making can only be achieved by using mould steels with materials properties trimmed specifically towards the intended use. Due to the increased share of **glass-fiber reinforced** plastics, **BÖHLER M340 ISOPLAST** is also increasingly suitable for this kind of processing. In addition, this grade also provides **good food resistance**. Approvals for the food industry are available from voestalpine BÖHLER Edelstahl.

The following properties are decisive: **Wear resistance, corrosion resistance, toughness, etchability and polishability**. An optimum combination of properties appropriate to the intended use is made possible by specifically tailoring the heat treatment.

**BÖHLER M340 ISOPLAST provides you with these advantages.**

## A STEEL FOR EXTREMELY HIGH REQUIREMENTS

**BÖHLER M340 ISOPLAST** is a high performance plastic mould steel with a hardness of max. 56 HRc:

- » Excellent corrosion resistance properties
- » Suitable for heat treatment in vacuum furnaces
- » Fine carbide structure
- » Good dimensional stability with appropriate heat treatment
- » Excellent high wear resistance / edge-holdingability
- » Good machinability
- » Good polishability

---

### Chemical composition (average %)

---

C	Si	Mn	Cr	Mo	V	+N
0.54	0.45	0.40	17.30	1.10	0.10	

---

# UNIVERSAL & TOP PERFORMING

Advantages which highlight the cost saving potential of **BÖHLER M340 ISOPLAST**:

**Well balanced material properties for an efficient tool manufacturing process:**

- » Good machinability
- » Consistently high quality
- » Good polishability
- » Dimensional stability
- » Technical assistance and advice in tool manufacture and use

**The usage of BÖHLER M340 ISOPLAST demonstrates its steadiness in several requirements:**

- » Highest precision parts
- » Processability of plastics containing abrasive (GF, CF, ...) and corrosive fillers
- » Elevated processing temperatures
- » Higher tool economy
- » Applications for food processing
- » Instruments and knives typical for cutting applications

## MICROSTRUCTURE

Comparison **BÖHLER M340 ISOPLAST** with WNr. 1.4112 – ESR. The fine, homogeneous microstructure results in good machinability and properties in service.

**BÖHLER M340 ISOPLAST, 200X**

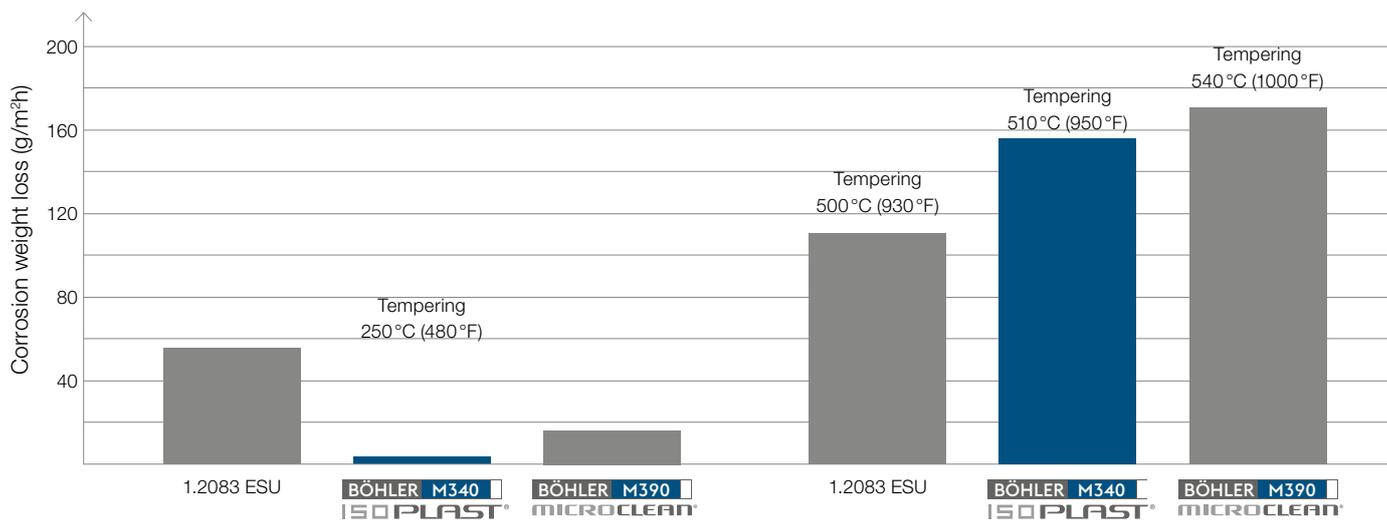

**WNr. 1.4112 – ESR, 200X**

# MATERIAL PROPERTIES

## Corrosion resistance

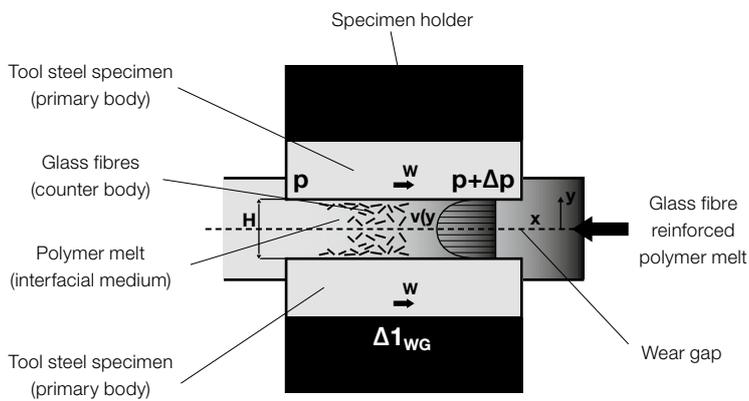

Heat treatment: without subzero treatment

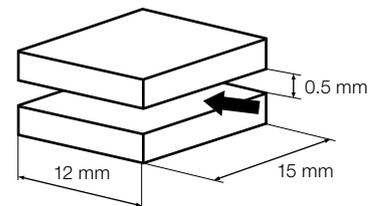

Hardening temperature: 1.2083 at 1020°C (1870°F); M340 ISOPLAST at 1000°C (1830°F); M390 MICROCLEAN at 1150°C (2100°F)

Weight loss test: measured after 24h in 20% boiling acidic acid

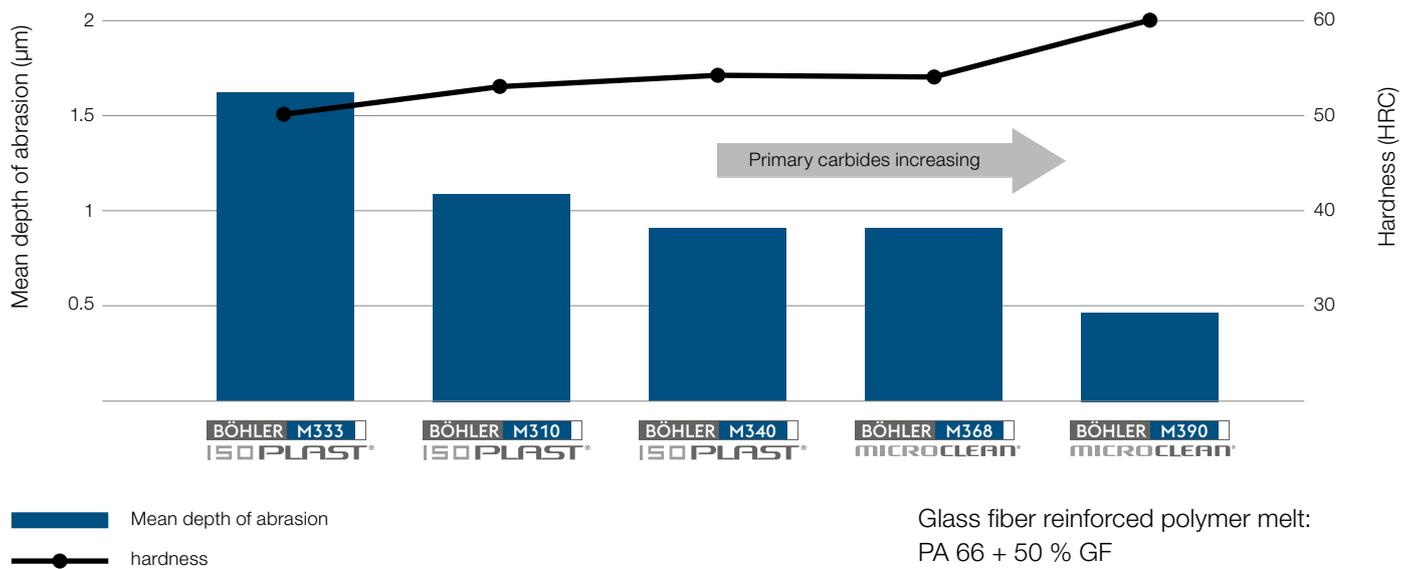

## Small Plates Wear Tests

Mean depth of abrasion or weight loss of the testing plates indicates the wear resistance.

## Wear resistance with plate-wear test

## HEAT TREATMENT

### Supplied condition

- » Soft annealed with max. 260 HB

### Stress relieving

- » approx. 650 °C (1200 °F)
- » After temperature equalization, soak for 1 to 2 hours in neutral atmosphere. Slow cooling in furnace.

### Hardening

- » 980 to 1000 °C (1800 – 1830 °F) / N<sub>2</sub>
- » Holding time after temperature equalization: 15 to 30 minutes

### Achievable hardness

- » max. 56 HRc

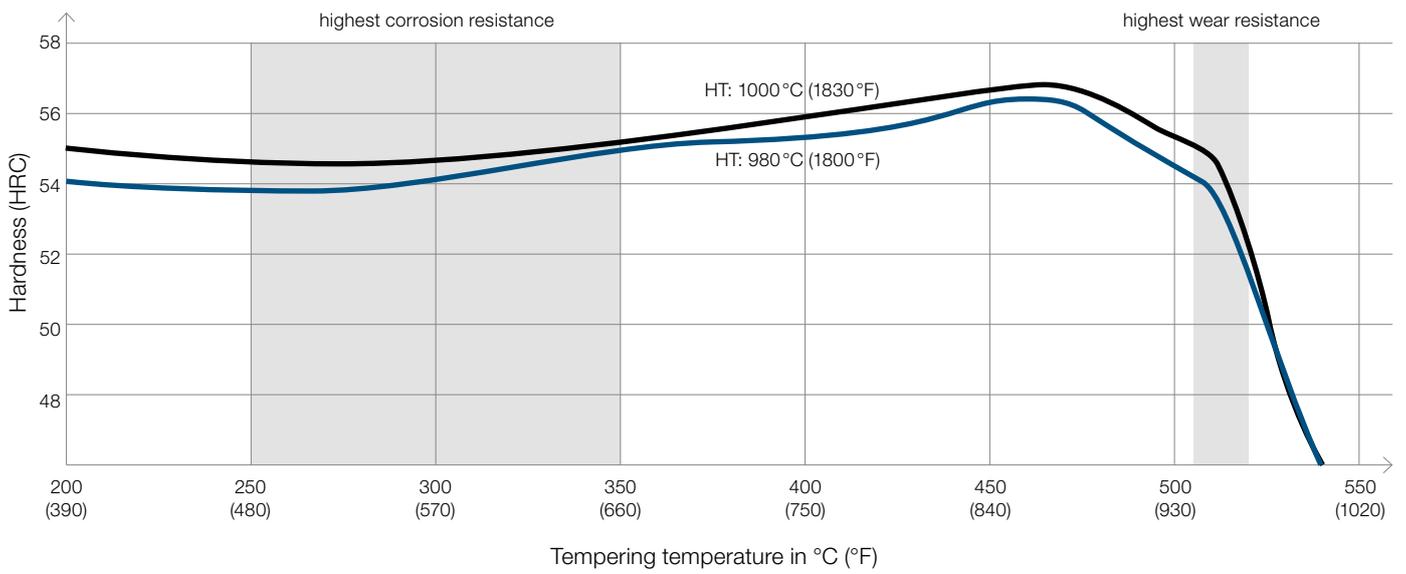

### Tempering for highest corrosion resistance

- » Deep freezing for transformation of retained austenite
- » Slow heating to tempering temperature
- » Time in furnace 1 hour for each 20 mm (0.79 inch) of workpiece thickness, but at least 2 hours
- » For information on the achievable hardness after tempering please refer to the tempering chart.
- » Tempering: 250 to 350 °C (480–660 °F)

### Tempering for highest wear resistance

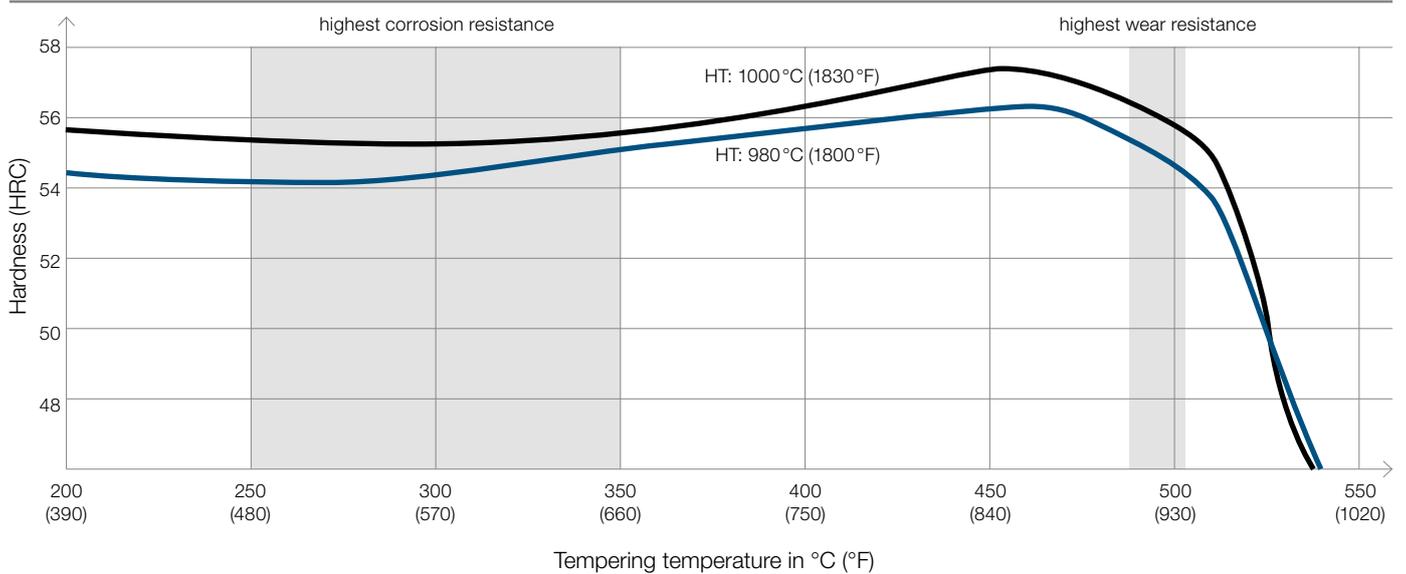

- » Deep freezing recommended
- » A deep freezing treatment immediately following hardening leads to increased tempering hardness values [Risk of stress cracking]
- » Slow heating to tempering temperature
- » Time in furnace 1 hour for each 20 mm (0.79 inch) of workpiece thickness, but at least 2 hours
- » For information on the achievable hardness after tempering please refer to the tempering chart.

### Tempering chart (without subzero treatment)

Heat treatment: Hardening in vacuum furnace; Tempering 3x2h

### Tempering chart (with subzero treatment)

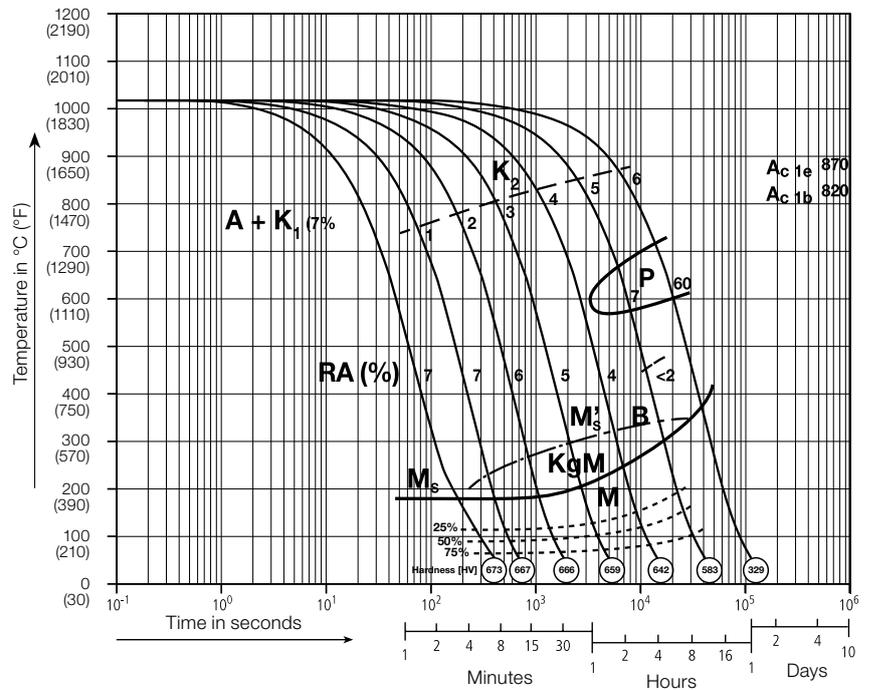

Heat treatment: Hardening in vacuum furnace; Tempering 3x2h

### Continuous cooling CCT curves

Austenitizing temperature: 1000 °C (1830 °F)  
 Holding time: 30 minutes

- 7...60 Phase percentages in %
- 0.4...180 Cooling parameter, i.e. duration of cooling from 800 – 500 °C (1470 – 930 °F) in  $s \times 10^{-2}$

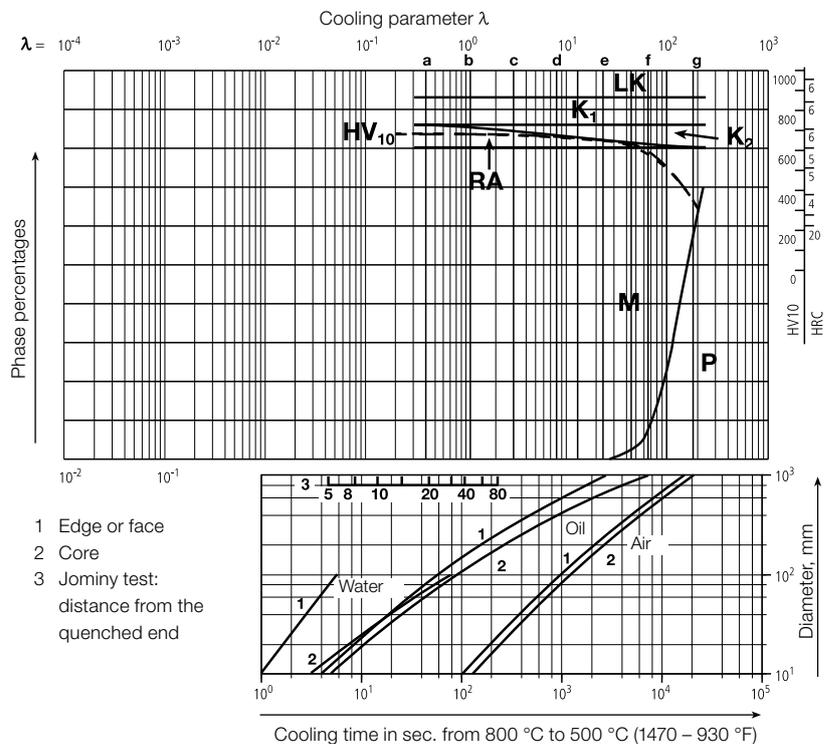

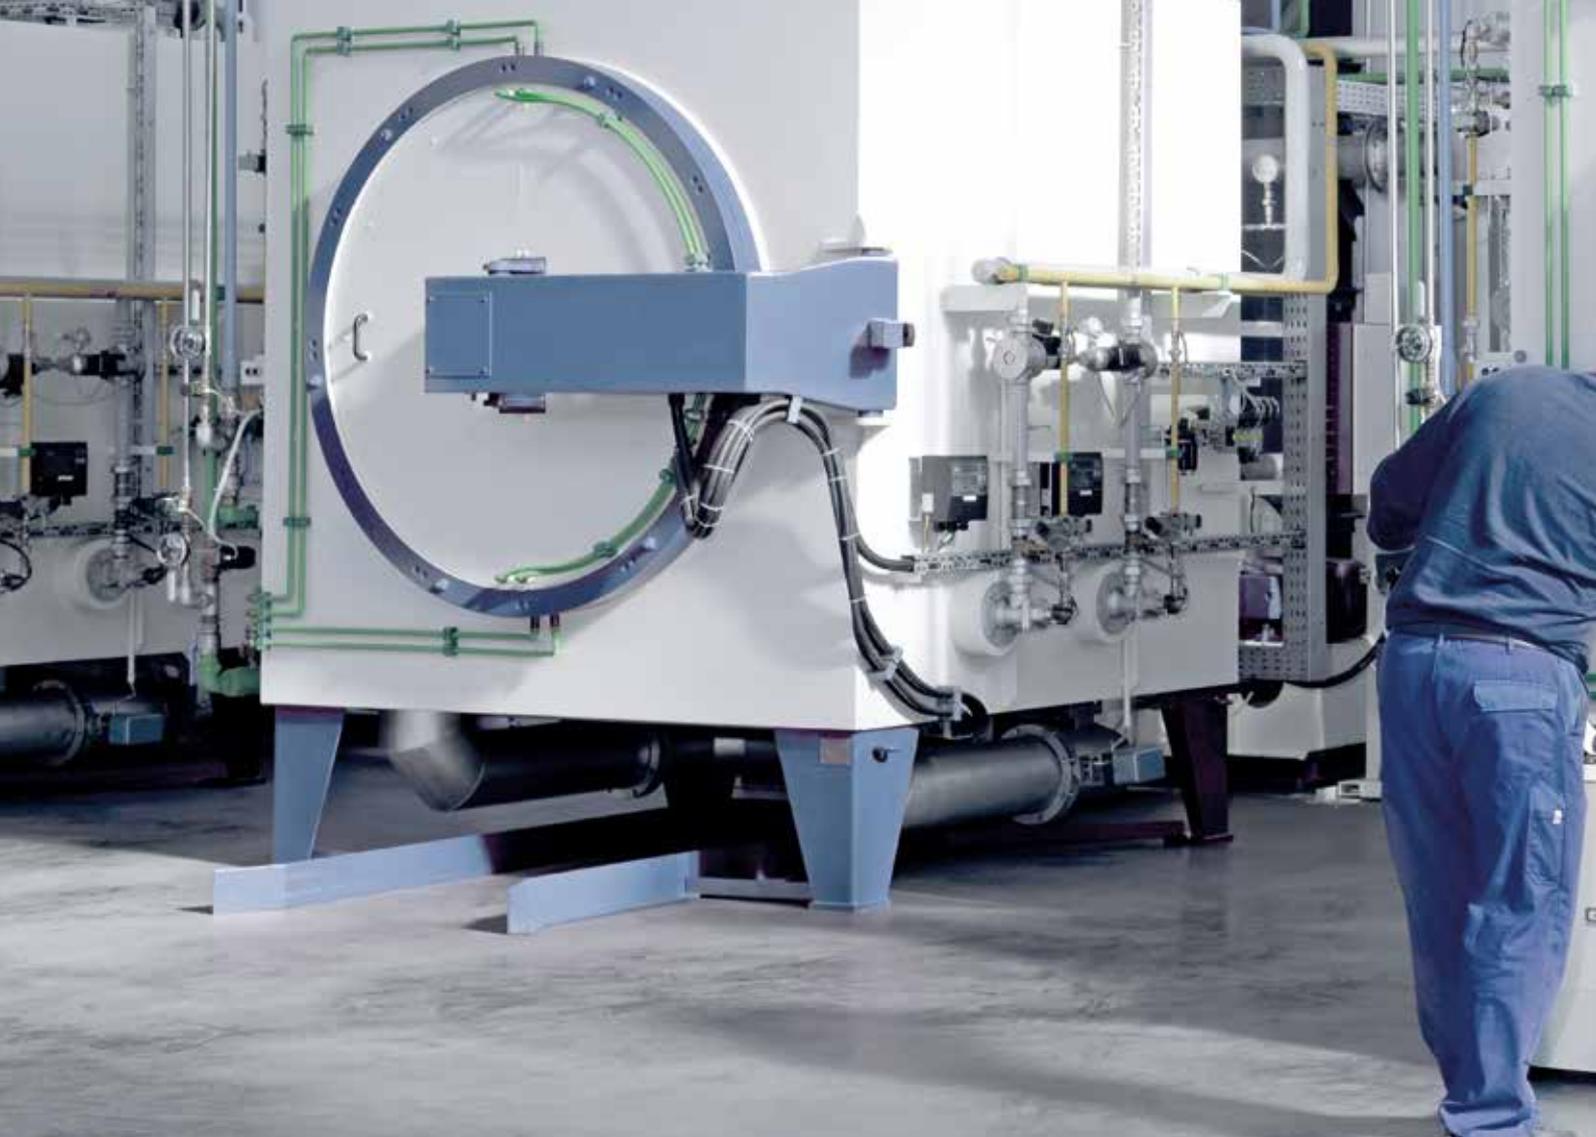

# TOP PERFORMANCE THANKS TO PROPER TREATMENT

## Quantitative phase diagram

- K1 Carbides which are not dissolved during austenitization (7%)
- K2 Start of carbide precipitation during quenching from austenitizing temperature
- Ms-Ms' Range of grain boundary martensite
- LK Ledeburitic carbides
- RA Retained austenite
- A Austenite
- M Martensite
- P Pearlite
- B Bainite
